Dear Hiring Manager,

I am writing to express my strong interest in applying for the IT Operations Associate position at Accenture Philippines. I am an Information Technology student, and I have developed a good foundation in computer systems, programming, networking, databases, and basic troubleshooting. I am eager to apply what I have learned in school and gain valuable experience in a professional IT environment.

I have knowledge of programming and different computer technologies, and I am familiar with tools such as Git and GitHub. Through my studies, I have learned how to identify technical problems, troubleshoot basic system issues, and find practical solutions. I am also willing to learn more about servers, networks, cloud technology, databases, and IT support, which are important areas of the position.

I am interested in joining Accenture because of its work in technology and its opportunities for employees to develop their skills. I would be grateful for the opportunity to learn from experienced professionals and contribute to the company while building my career in Information Technology.

Thank you very much for considering my application. I hope to have the opportunity to discuss how my skills and interest in Information Technology can contribute to Accenture.

Sincerely,

Mariane C. Ramos

Prepared by: Mariane C. Ramos
Position Applying For: IT Operations Associate (Entry Level)
Company: Accenture Philippines
Location: Manila, Philippines

Source of Information:

Found through the Accenture official careers website, under Entry Level Technology opportunities. The IT Operations Associate role involves maintaining IT systems and infrastructure, working with servers, databases, networks, and cloud technologies, and supporting incident identification and resolution. The posting also identifies IT-related courses as relevant qualifications.

Date accessed: September 25, 2026

Information Verification:

- **Credibility:** The information was obtained from Accenture’s official careers website, which is the company’s own recruitment platform.
- **Accuracy:** The position title, responsibilities, and qualifications were checked against Accenture’s published job information.
- **Currency:** The job information was checked on September 25, 2026.
- **Bias:** The information mainly describes the position, qualifications, and responsibilities rather than making exaggerated promises about the job.

As an IT Operations Associate, I will:

- Help administer and maintain IT systems and infrastructure.
- Work with servers, databases, networks, and cloud technologies.
- Help identify, prioritize, and resolve IT incidents and technical problems.
- Learn and use IT tools and service-management procedures.
- Participate in improvements and automation of IT operations.

Evidence:

PROCESS AND INTEGRITY NOTE

I found the IT Operations Associate position through Accenture's official careers website. I checked the job information to make sure that the company, position, responsibilities, and qualifications were connected to an actual Accenture recruitment posting. The role is related to Information Technology because it involves IT systems, infrastructure, servers, databases, networks, cloud technologies, and technical support.

Before preparing my application documents, I checked the credibility, accuracy, currency, and possible bias of the information. I used Accenture's official careers website as my main source because it is published by the employer itself. I also made sure that the responsibilities of the position matched the skills and knowledge that an IT student can develop, such as troubleshooting, computer systems, networking, databases, and basic programming.

For the writing process, I used AI only as a support tool to help organize my ideas, improve sentence structure, and make my documents clearer. I reviewed and edited the content so that it represents my own skills, education, and career goals. I did not copy information from another student's portfolio.

I also followed proper privacy and integrity practices while preparing my portfolio. I did not include passwords, private account information, or other sensitive information. The information about the company and job position was based on publicly available recruitment information, and I included evidence to show where the information came from.

**ITE 366 Introduction to Computing | Period 2 Checkpoint
INDIVIDUAL REQUIREMENT****Professional Application Portfolio***Resume, Cover Letter, Job/Employer Reference, and Process & Integrity Note***Prepared by:****Name: Mariane C. Ramos**

Student Number: 01-2627-005402

Permit Number: 493851372724

Submitted to:**Jericho C. Bernardo
Subject Teacher**

ITE 366 Introduction to Computing | Period 2 Checkpoint

Professional Application Portfolio

I. Checkpoint Overview

This Period 2 Checkpoint is an individual submission. You will create a professional application portfolio for a real or realistic job, internship, part-time position, or entry-level opportunity. The purpose is to apply information literacy, responsible AI use, professional digital communication, and word-processing skills in one practical output. Your work should look like something you would be willing to send to an actual employer. No oral presentation is required; the portfolio will be evaluated as submitted work.

II. Required Submission

- **Resume** - Create your own one-page resume. You decide the layout, organization, visual style, and section order. Include only truthful information that supports your target position.
- **Cover Letter** - Create your own one-page cover letter for the same position. It must be tailored to the role or organization rather than copied from a generic internet template.
- **Job / Employer Reference** - Include evidence of the opportunity used as your basis. This may be a screenshot of a job post, a company careers page, a reputable job platform listing, or another clearly identified professional source.
- **Process & Integrity Note** - Write a 150-250 word reflection explaining how you researched the opportunity, how you checked the information, and whether AI was used. Write this in your own format and voice.

III. Creative Freedom and Professional Responsibility

There is no required resume or cover-letter template for this checkpoint. You are expected to make your own design decisions. Creativity is encouraged when it improves clarity and professional presentation. A strong application document is not the one with the most colors or decorations; it is the one that presents relevant information clearly, consistently, and appropriately for the target career.

- You may use a traditional, modern, minimalist, or creative layout.
- You may use columns, section dividers, icons, subtle color, and other professional visual elements.
- A professional photo is optional; include one only if you intentionally choose to do so.
- You may organize sections differently depending on which strengths you want to emphasize.
- You may use Microsoft Word, Google Docs, Canva, or another appropriate document tool, but the final output must remain readable and professional.

IV. Module Connections

Module	Skill to Apply	Evidence in the Portfolio
Module 5 - Information Literacy	Search effectively and evaluate credibility, accuracy, bias, and currency.	Use an appropriate opportunity, check the job/employer information, and explain your verification process in the Process & Integrity Note.
Module 6 - Responsible AI Use	Use AI as support, verify output, protect privacy, and remain responsible for the final work.	If AI is used for brainstorming, grammar, wording, or feedback, review and edit it yourself and briefly disclose the use.
Module 7 - Digital Communication & Professional Presence	Apply professional tone, netiquette, and appropriate digital communication.	The cover letter, contact details, profile links, and overall communication should be suitable for an employer.
Module 8 - Word Processing & Document Formatting	Create structured documents using formatting, layout, editing, and document-management tools.	The resume and cover letter should demonstrate clean structure, consistent formatting, readability, and careful proofreading.

ITE 366 Introduction to Computing | Period 2 Checkpoint

Professional Application Portfolio

V. Resume Requirements

Create a one-page resume that is appropriate for the position you selected. There is no required section order. Choose the information and arrangement that best represent your strengths as a student or future professional.

- Name and professional contact information
- A short objective, profile, or professional summary when appropriate
- Education
- Technical skills and soft skills
- School projects, programming/IT projects, major outputs, activities, or competitions
- Volunteer work, organization involvement, training, seminars, or certifications
- Work experience, if you genuinely have any
- Portfolio, GitHub, LinkedIn, or another professional profile link when appropriate

Do not invent work experience. A student without formal employment can still create a strong resume by presenting relevant projects, responsibilities, training, skills, and achievements.

VI. Cover Letter Requirements

Your cover letter should support your resume rather than repeat it word-for-word. It should explain why you are applying, why you are interested in the role, and how your background relates to what the employer needs.

- Use a professional greeting and closing.
- Identify the specific position you are applying for.
- Show that you understand the role or organization.
- Connect your skills, education, projects, or experience to the position.
- Use specific examples instead of vague claims such as 'I am hardworking.'
- Keep the tone confident, respectful, and professional.
- Proofread names, company details, spelling, grammar, and punctuation before submission.

VII. Job / Employer Reference and Information Literacy

Your chosen job or opportunity should come from a source that can reasonably be used for a professional application. Before using the information, consider the Module 5 CABC checks: Credibility, Accuracy, Bias, and Currency. Your Process & Integrity Note should briefly explain how you decided that the information was usable.

- Credibility - Who published the opportunity or employer information?
- Accuracy - Can important details be confirmed using the employer's official information or another reliable source?
- Bias - Is the information mainly informative, or does it make misleading or exaggerated claims?
- Currency - Is the job post or employer information current enough to use?

VIII. Responsible AI Use and Process & Integrity Note

AI may be used as a support tool, but it must not replace your own thinking, judgment, or responsibility. If you use AI, you are expected to review the output and make the final decisions yourself. Do not place passwords, government IDs, bank details, student records, home addresses, or other unnecessary sensitive information into AI tools.

- Where you found the job or employer information and why you considered the source usable
- What you did to check whether the information was current and trustworthy
- Whether you used AI; if yes, what it helped with and what you personally reviewed, revised, or verified
- How you protected your privacy and avoided sharing unnecessary sensitive information
- One writing or design decision you made to make your application more professional

IX. Submission Format

- Combine the resume, cover letter, job/employer reference, and Process & Integrity Note into one organized submission unless your instructor gives a different instruction.
- Preferred final format: PDF, so the layout remains consistent across devices.
- The original editable file may also be requested for checking.
- Suggested file name: Lastname_Firstname_P2Checkpoint.pdf
- This is an individual submission and no oral presentation is required.

X. Professional Quality Standards

- Information must be truthful, relevant, and appropriate for the target role.
- Design must support readability and professionalism.
- Fonts, spacing, alignment, headings, and visual choices should be consistent.
- Grammar and spelling must be checked.
- The cover letter must be tailored rather than copied from a generic template.
- AI-assisted content must be reviewed and edited by the student before submission.
- Do not include passwords, government IDs, bank details, or unnecessary sensitive personal information.

XI. Grading Rubric - 100 Points

Criteria	Description	Points
Resume Content & Relevance	Clear, truthful, and tailored content. Strong use of education, skills, projects, experience, and achievements appropriate to the selected role.	25
Resume Design & Readability	Original organization, professional visual choices, clear hierarchy, consistency, spacing, alignment, and readability.	15
Cover Letter Quality	Specific to the selected position, professional tone, strong structure, and a clear connection between the student and the role.	25
Information Literacy	Appropriate job/employer source and evidence that credibility, accuracy, bias, and currency were considered.	10
Responsible AI & Integrity	Honest disclosure when applicable, meaningful human review, privacy awareness, verification, and responsibility for the final submission.	10
Digital Professionalism	Professional language, appropriate contact/profile information, and communication suitable for an employer.	5
Overall Polish & Creativity	Thoughtful presentation, originality, proofreading, consistency, and a complete submission that feels ready for a real application.	10
